

# Information Sheet for the Kelti<sup>®</sup>CHIP

## 1. Background: How did I come up with the Kelti<sup>®</sup>CHIP?

On a seminar by Dr. oec. Katharina Friedrich, [www.BeTeWi-Akademie.de](http://www.BeTeWi-Akademie.de), I witnessed how the water quality measurably and noticeably improved, including its taste, as a result of a water ionising card that was placed underneath – after five minutes the water in the glass was more pleasant, complete, and softer.

These celtic rune symbols, which are structured according to a specific way and size to a measuring accuracy of nm, increase the percentage of negative hydrogen-ions, H<sup>-</sup> after a short period of time by 27%, which is measured radionically. Experiments showed that the body fluids of human beings register this information and that it can lead to regulation.

The Kelti<sup>®</sup>CHIP was developed from the water ionising card with the open circle. Radionically added affirmations were added, for example with the following themes:

- Vitality & more pleasant feelings
- as well as different materials

The chip is available as

- **Gel**, which can be worn in socks, trouser- and jacket pockets;
- **Sticker** in one of the two shoes or mobile phone;
- **Badge** on clothes or bags.

## 2. Targetgroup

Old and young; the healthy & the sick, the lazy & those who hunger for knowledge, animals & plants

## 3. Benefits

### 1. Pain reduction through the Kelti<sup>®</sup>CHIP

Due to uneven muscle and sinew strains, as well as misalignments of the musculoskeletal system, movements in everyday life can cause pain. As a masseur, I have been contemplating over an extended period of time why these keeps recurring over and over, even after intense treatment. After intense research I have found the

cause for my own understanding and have developed a solution for this situation. CHANGE THROUGH VIBRATION/FREQUENCY by means of Kelti<sup>®</sup>CHIPS.

Everyone has sensors on the soles of their feet, which communicate with the cerebellum. The purpose of this communication is to ensure the linking of muscles in such a way that it guarantees a straight musculoskeletal system. This procedure is called *Proprioception* or neurocybernetic muscle regulation.

Changes in the jaw as well as teeth regulation or teeth renewal or already during childhood through the change of milk teeth a misalignment of the musculoskeletal system begins (difference in the length of the legs).

The cerebellum has the task of learning movement patterns within a time frame of about 2-3 weeks, and also of storing them and if necessary recalling them.

If a misalignment is caused by irritation such as changes in the jaw, influences caused by mobile phone radiation or stress, then the cerebellum learns this position as a tilting through a difference in the length of the legs and this misalignment is adhered to until the cerebellum learns a new/different state.

This condition is a type of treadmill like a hamster wheel, which lets the cerebellum continually revert into the learned and stored system, even if the body is adjusted and straightened through so-called manipulation.

There are two more significant factors that cause a misalignment of the musculoskeletal system/spine: influences through mobile phone radiation and psychological or physical stress.

### 2. Neutralisation of damaging mobile phone radiation

Let's begin with some information about the DNA. DNA-spins are the architects of functional molecules (mass – the smallest particles that are connected) and form the whole body. Spins are constructed in spirals, whereby the atoms become spirals. Hence the left-handedness of amino acids (left-turning), which build proteins and the right-handedness of sugar (right-turning), which builds nucleic acid.

It was discovered at the University of Münster that electrons, and as such mobile phone radiation, can either cross layers of DNA molecules or are constrained depending on the direction of their spin. Electrons with a left turning spin are preferentially passed. However, electrons with a right turning spin are absorbed by the DNA.

# Informantion Sheet for the Kelti<sup>®</sup>CHIP

What effects does that have? The right-turning stuck electrons constitute a high risk, because over time they destroy the DNA through the formation of free radicals. Unfortunately the omnipresence of mobile networks has a fatal effect here. If the left-handedness of the smallest particles is changed into right-handedness, then this means danger to and damage of the genetic material.

Those electrons, which we have been given by nature, are always left-turning. Right-turning electrons often only come to exist through technological influences. If you have wrong-handedness as a result of electro smog or mobile phone radiation (left-handed amino acids then become right-handed), then insolvable problems arise in our body. Our body cannot reject or release wrong proteins.

What happens to the invasion of wrong proteins? The body reacts by storing them. Most often in places where an unusually strong blood circulation takes place, such as the brain. The stored wrong proteins disturb the natural functioning of the brain in dramatic ways. Through adhesion they disturb the nerve pathways in the brain and cause neuronal malfunction of the intellectual and emotional processes as well as vital control mechanisms.

In conclusion it can be said that wrong handedness leads to a decrease in vitality and performance and to illnesses (including death of the organisms). If you would like to know more about this topic: brochure series under the topic publications at [www.kompetenzinitiative.net](http://www.kompetenzinitiative.net)

### 3. Effects caused by psychological or physical stress

Every person reacts to stress differently.

One will have a headache, someone else feels an inner restlessness. Stress manifests through different physical and psychological symptoms – for example nocturnal teeth grinding, **back pain**, fear, irritability, and so on.

Psychosomatic illnesses can also be partially due to stress.

Stress can affect:

- **Physically** (for example tension, tremors, pelvic misalignment)
- **Mentally** (for example poor concentration, prolonged reaction time)
- **Psychologically** (for example resignation, panic attacks, bleakness)
- **Behaviourally** (for example changes in eating habits, overreacting or increased consumption of alcohol/coffee/nicotine)

The autonomous nervous system (which is not subject to deliberate control) becomes the director during an acute stress reaction, namely the sympathetic nervous system. This part of the nervous system is responsible amongst other things for activation, flight and fight. The parasympathetic nervous system is the counterpart of the sympathetic nervous system and regulates processes that take place in the body when it is calm, for example food intake.

All these responses to stress are biologically sensible. If we would react calmly to everything, we could not cope with danger. However, the stress and anti-stress system dates back to times when fight or flight often dominated life. Modern life is characterised by completely different stress factors (for example the dual burden of family and job, performance pressures and so on), which take affect over a longer period of time though. Usually people cannot react to these stress stimuli with movement ("flight"), which would help to reduce stress.

If permanent stress is not balanced with suitable counter measures, such as relaxation, change of the situation, conflict resolution and so on, the body continually produces cortisol. This stress leads to illness.

This is where the developed **Kelti<sup>®</sup>CHIP** comes in.

It changes the frequency which influences the cerebellum negatively, so that tensions such as the flight reflex and fears cannot come into effect.

It does not always initially reduce acute pain. By wearing it continually for at least 21 days the whole motor system reverts to its original form, which it will maintain thanks to the **Kelti<sup>®</sup>CHIP**. As a result over time pain, misalignment, disharmony in relationships und much more will disappear.

I would love to hear about your experiences.

Sincerely *Josef Vomela*
